Speed and quality is a reality at Copy Print not witchcraft

Being a top quality digital printer with speed and flexibility are characteristics of Copy Print Kopie & Druck GmbH in Germany. They have become experts in this arena and it's this that customers appreciate.

Each month several hundred digital printing orders are brought into the two stores and handled by approximately 20 employees. Copy Prints portfolio is as wide as it is deep and ranges from simple black and white copies to personalised printed matter, such as paperbacks or technical manuals. To be able to cope with the large range of different types of orders and of varying amounts from a mixed and established clientele of the company every minute counts. To cope with this variety of work, Copy Print has XEROX, Océ, and Heidelberg digital presses. "We want and need to be fast and flexible when handling the incoming orders", declares Uwe Büning, Executive Director of Copy Print. As a first class service provider Copy Print never loses track of the quality of its products.

Having such a diverse customer base brings a wide variety and type of data. These files have to be introduced into Copy Print's PDF workflow. "During the order acceptance we are checking the incoming data for their quality", explains Uwe Büning. "Finding the problems before they get further into the workflow. This avoids the worst case when the jobs do not go through the RIP." Reasons for this include, missing data elements, transparencies or PDF documents out of MSOffice applications. "Formerly, we had to send back the files to our customer to correct." This results in both Customer and Printer losing precious time and money.

Case Study (page 2)

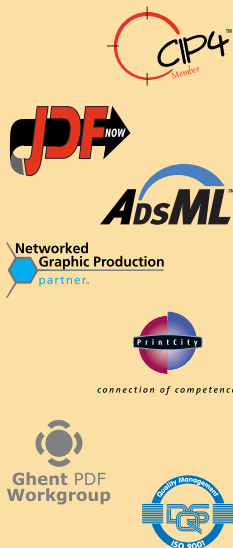

Thus Uwe Büning was then in the market for the possibility to optimising incoming files for the printing process. Within his research he discovered OneVision Software AG and it's showcase of software solutions. The products Speedflow Check and Speedflow Edit convinced him right away. "I thought: That's it!" Since than incoming PDF-files for digital printing have been automatically checked by Speedflow Check and optimised for further handling. If there are any necessary corrections to be done they can be carried out manually with Speedflow Edit.

With OneVision software solutions it is possible to flattern transparency amongst a number of other conversions in order to create the PDF version needed for the workflow. "With these advantages of OneVision Speedflow products we are able to completely separate our customer's data into its individual elements. These can then, according to requirements, be treated and optimised", states Uwe Büning.

"Now we are able to eliminate file errors without bothering our customers." It's fast and saves valuable time. Furthermore, cost intensive problems and reprints have been reduced enormously as well as RIP failures. In this way Copy Print has a competitive advantage with Speedflow: "At Copy Print it just works! Of course our customers notice this fact", explains the Executive Director. "In this respect for me there is no better product!" Satisfied customers always like to come back. Speed and quality are not just made with witchcraft at Copy Print Kopie & Druck GmbH.
